ACTION	YES	NO	N/A	COMMENTS
Do not change the shape or size of the basin without consultation with the Engineer.				
Ensure that the area where the basin is to be placed is permitted for this activity.				
Ensure the area where the basin is proposed will be suitable for the device, i.e. soil type, access, etc.				
Maintain access to the basin at all times so that it can be cleaned when needed.				
Remove the basin at the end of the project, if required.				
Ensure that the pipe, riser, anti-flotation device, sediment control stone, and trash rack meet the requirements of the plans or Standard Drawings.				
Compact the dam with good soil so that it is strong enough to withstand the volume of water.				
Construct the overflow spillway on natural ground and stabilize immediately.				
Seed and mulch the dam.
